What's New In AutoCAD?

To quickly incorporate ideas from printed paper or PDFs into your designs, you can use either the Import feature to automatically import and place the information or you can use AutoCAD's Markup feature to add markup and annotations directly to your design. You can quickly track changes to designs with Markup Assist, as well. Markup Assist in addition to the existing Markup and Markup Assistant features now supports marking up AutoCAD drawings with drawings created in AutoCAD Raster Designs. (video: 2:45 min.) On-screen capture/rotate in place of printing: Printing can be a time-consuming task. If you would like to print a document on-screen, you can instead rotate the on-screen document so you can print it. This lets you print from one page, then just rotate the printout to the correct orientation. (video: 1:50 min.) Multi-Display: You can now work on a single design on multiple displays, using a feature known as Multi-Display. Multi-Display lets you view your design on multiple displays at the same time and has multiple benefits. For example, you can set an artboard that is viewable on all the displays at once. Or, you can view and print your work on a second display while viewing it on your main display. You can also view multiple views of your same drawing at the same time, using Multi-Display's Markups or markers. Multi-Display also lets you view and zoom in multiple views of a design at the same time. (video: 3:00 min.) Miscellaneous Updates to the following features: Flexible grids: More flexible layouts, new feature options, better placement, and more. New layout options are available to make placing and managing grids more flexible. You can now move and resize a grid independently. You can now use a grid to change the default paper size and choose new paper sizes. You can now choose to show grid numbers instead of crossing points. A new ruler type is available that allows you to type numbers for the grid number to show or to use space to advance the grid display. (video: 4:45 min.) The G-S grid is available to display the Global Set and the New Global Set. (video: 1:40 min.) Dimension preferences: You
