Features AutoCAD is a feature-packed, full-featured CAD application. The three basic levels of functionality are: Drafting, Design, and Documentation. The Drafting and Design levels are "more traditional" CAD levels, meaning that they were present in more primitive CAD applications. (See section "History" for more information on CAD design levels). The Documentation level is a modern innovation, so it is only available in the newer versions of AutoCAD. Drafting is the lowest level. It includes basic commands for drawing 2D and 3D objects and features for page layouts. The other two levels of AutoCAD are more advanced. The Design level offers most of the 2D and 3D drafting features available in Drafting, plus several 2D and 3D object-editing commands, support for page layouts, and tools for plotting and analyzing 2D and 3D objects. The Documentation level includes all the Design level commands, plus 2D and 3D modeling tools. Drafting The primary function of the Drafting level of AutoCAD is to draw 2D and 3D objects. There are five basic commands that enable you to draw a series of 2D objects. These commands are: "LINE" command - Draw a line "RECTANGLE" command - Draw a rectangle "CIRCLE" command - Draw a circle "ARC" command - Draw an arc "POLYLINE" command - Draw a polyline As well as the five basic commands, the Drafting level includes an In-Place Editor (IPE), which is essentially the same as the "RECTANGLE" command, but offers a graphical user interface. Drafting also includes two advanced commands, the "RECTANGLE" and "POLYLINE" commands, which have multiple options. AutoCAD also includes a 3D modeling feature. It is known as 3D Drafting because it provides most of the same commands and functionality as traditional 2D Drafting. The main difference between the 2D and 3D features of AutoCAD is that the 3D features have a focus on modeling objects in 3D, with less of a focus on drawing and editing 2D objects. The 3D features also include commands and functionality for creating and editing 3D shapes. There are several 3D modeling tools available in AutoCAD. The oldest of

in South Africa. The company was founded in 1969 by former Cape Town Zoo director Dr David Mackendrick and became the first soft drinks company to become a public company in South Africa. History Founding and early years Dr David Mackendrick had worked in Australia and England and was working in the zoo in Cape Town when he was approached by a friend who ran a bottling company. He was asked if he would consider bottling a new drink for his friend. Mackendrick agreed and became interested in the new drink and saw the possibilities it held for the local market and the potential to become a large volume bottler. The company was incorporated as Mackendrick's in 1969. Initial bottling was done in a hall at the company's offices on Groot Marais Street in the centre of Cape Town. Mackendrick's flagship product was a strawberry drink produced in 3 flavours – strawberry, apple and banana. It was launched in a large ceremony on 4 November 1969 at the Cape Town International Convention Centre. The soft drink was a failure at first and became a huge hit when it was introduced to the South African rugby league. Mackendrick's was the official soft drink of the South African rugby league and was launched at the 1974 Rugby League World Cup. To this day, to celebrate the official launch of the soft drink Mackendrick's throws a party on the Friday of the World Cup. Expansion The company grew steadily over the next few years. In 1972 it expanded into a larger factory. In 1974, Mackendrick's was among the first to use reverse osmosis technology to make water for their soft drink. By 1975, the company employed over 200 people. Facing competition from local bottlers, Mackendrick's turned to international markets. It established operations in Europe in 1979 and in North America in 1981. Decline This approach resulted in sales falling from 11,850 ca3bfb1094

AutoCAD now features an Insert Dashes & Curves dialog box with an easy way to create dashed lines, swept lines, dotted lines and more, which lets you automatically generate dashed, swept or dotted lines on your drawing. In the past, if you created dashed or swept lines and needed to add space to the drawing, you would have to first go to the Arc/Circle options and toggle the Auto-snap distance to On. Then, add the space. Today, you can use a single command to generate dashed or swept lines with the dashes or circles automatically placed. (video: 1:50 min.) Introducing Markup Assist. Autodesk is a leader in 2D design and illustration, so it's a natural fit for us to make Markup Assist available to our CAD customers. Markup Assist is a tool that quickly and easily marks up your existing drawings, which makes it easier for others to read, understand and revise your drawings. (video: 2:45 min.) Smart Layers and Tools: A smart layer allows you to see important design features of your drawings in your browser, without opening a separate drawing. You can now use the Research toolbar for drawing with Geometric operations, so you don't have to convert your drawing to 3D. (video: 1:30 min.) You can use the 3D tools in AutoCAD to create models, which can then be viewed in 3D on your browser. This gives you a 3D drawing, which can be printed and shared with others. (video: 1:50 min.)
