YesQ: Convert localization to globalization I am looking to convert my project to Globalization All the strings are contained in the resource folder: Current Project: "SourceCodes.strings" Current Solution: "Global Strings.xlsm" I am able to convert the strings from the local or the Global strings in the Project folder to all the strings in the current solution. This allows me to change it to Globalization easily. However, I am not able to change the strings from the solution folder to all the strings in the current project. Is there a way to do this? A: Check this link . Only the.res files are converted. EDIT: There is no solution yet to convert the whole project to Globalization. However you can take the solution folder, open it in Visual Studio and copy the.res files into your project. This is easy to do if you have all the.res files together in one location. Go to Solution Explorer Select the Solution folder Right click and select Add > Existing item Select "Add to project" to add to the project folder Click "Add" Copy the.res file to your project, and change the copy to "Add as Link".

Epidermal inclusion cysts are benign, slow-growing epidermal appendages. They can arise as a result of trauma to the skin or may originate in nonhair-bearing areas. They may occur in the central portion of a hair follicle, within the interfollicular epidermis, or subcutaneously. The formation of an epidermal inclusion cyst depends on the presence of an abnormally organized pilosebaceous unit. It can be associated with other disorders, and may be complicated by infection. We present the case of a 57-year-old man with bilateral, painful, inflamed subcutaneous nodules. Biopsy of a right nodule revealed an epidermal inclusion cyst. The patient had a history of alcohol abuse and diabetes. The diagnosis was made with histologic examination of a plaque-like lesion in the right submandibular region. The cyst was surgically removed, and histologic examination revealed an epidermal inclusion cyst. Although rare, epidermal inclusion cysts can be associated with other skin disorders and may be infected. Surgical removal is curative. Histopathologic examination is crucial to make the diagnosis.Related Coverage NEW YORK (CNN) — America’s obsession with New York City’
