OpenContacts.NET Description

OpenContacts.NET is a free lightweight library which enables you to import the contact list from different

web-mail services, such as Yahoo! Mail, GMail and Hotmail, into your.NET application. The library needs only a web-client or a similar applet to work. Features: OpenContacts.NET is easy to integrate. It's a tiny standalone.NET library which is small, simple and fast. It doesn't require any installation. The whole library, OpenContacts.NET.dll and all the assemblies it requires, can be easily compiled to a single EXE file. Even if it's not supported, OpenContacts.NET is easy to use and test.

OpenContacts.NET is compatible with.NET 1.1 and above, as well as with Visual Studio 2003. Install OpenContacts.NET is distributed as a Visual Studio Project Open the.NET Project to download the source code: Open Contacts.NET Project Open Contacts.NET Setup Notes OpenContacts.NET requires Internet Explorer 6 or 7. If you don't have it, you will need to install it first. To set up OpenContacts.NET, you need to have your mail service's details saved in a file. This file will be used to verify your mail service's registration with

OpenContacts.NET. If your mail provider doesn't provide you with a file, you may have a chance to contact them and get the file from them. If there is no file to contact them with, then the provider probably isn't registered. OpenContacts.NET has multiple mail servers which can be used to import the contact list from. You have to define which server you use and click on the button to import your email contacts into.NET. You should only use one server at a time. Otherwise the imported contacts won't be imported because of a

duplicate registration error. It is possible to upload your contacts to your server by selecting Import Contacts into this Mail Server OpenContacts.NET Documentation OpenContacts.NET Documentation OpenContacts.NET.NET OpenContacts.NET is a.NET 1.1 and above project which doesn't require you to download it as a standalone library. browsing feature that splits Safari into different windows, allowing you to manage multiple web pages using the same web browser. This new feature allows you to switch from one web page to another without losing your current browsing data. Safari is the first major browser that offers tabbed browsing capability. "Safari 4.0.1 now allows you to choose from an astounding number of tabbed browsing windows, and customize each of the windows to help you carry on your favorite activities on the Web," said Scott Kovacevic, associate

software development manager at Apple. "Not only does the new tabbed browsing feature allow you to easily access your favorite web pages without switching back and forth, but it also allows you to more easily view, organize, and manage your different web pages." Apple also offered a Safari Web page which shows different accounts for Windows and Macintosh users. The page shows different accounts for Windows and Macintosh users, lists the accounts supported on a Macintosh and a Windows-based Mac, and provides sample Safari

configuration information for each account. The Safari 4.0.1 Web page also contains a few more useful tips on how to get the most out of Safari 4.0.1. OpenContacts.NET Description: OpenContacts.NET is a handy and lightweight
