The design of the world is impressive. Looks nice on the map. But that doesn't take much into consideration. The atmosphere is chilling. The story seems to be unique, but the legendary world is very familiar and interesting. The game is able to support a large number of characters and various roles. Some parts of the game are annoying. You are asked to make repetitive moves. "Reception is history. History is not the past but the future. It is therefore not so much the things that happened but what becomes of the things that happened that is the gist of history." - Sun Yat-Sen What's Hot Elden Ring is a fantasy RPG set in the lands

between the parallel worlds of Elden and Ashan. A new fantasy RPG for the Vita that straddles the world of two opposite realities. The world map is large and appears to be quite detailed. A variety of interesting dungeons, battles, and stories. The game comes with over 1.3 million words of text that add a lot of depth. Everyone is born. And people die. Babies are going to dream. They are going to walk. They are going to grow, get older, get a chance to live and die in the world of reality. While doing so, they are going to have new experiences. And new memories. And new feelings. They are going to get lost. To find themselves. And they will make their own choices. They are going to wonder. There is an infinite number of possibilities. Each one unique. Each one limitless. The story of Elden Ring is one of the many possibilities. If you think about it from a distance. The game begins with a man named Haebyeolbeath. A chance encounter in the Orboros continent results in a rendezvous with an unknown character from the Land Between. And that someone. That some person is history. But that person is also a fantasy that imagines the story of yourself. And that person is also your mother. Everyone. You and your mother are in the lands between. You are born. And your mother is no longer here. It's a story of your mother, your bff6bb2d33

Install it on Steam or Emulator on your PC.

Connect your Modem to your PC (if it doesn't connect when you download Steam then first launch Steam and then launch the game and you'll be asked to connect your Modem).

Run the game and wait until "A new game" is shown.

Run Steam and launch the game you have just installed by clicking the created icon which is usually on your desktop.

Click "Play" and wait...

Wait until the game is done updating and you'll then be asked to restart Steam. When you finish the restart Steam, you should be asked to update again. DO NOT Close Steam again.

If you have Steam installed and logged in at the time, login using your Steam username and password. If you don't have Steam installed at the time, login using the username and pass created when you purchased a game.

The game will usually say the game was updated when it starts up. Click the locked icon on the right side for the game's settings page.

Click the "Steam" button. It usually says "Modify App settings" and let the game run through the first two options in the list. Otherwise, it will be called something else that says something like "Options" or "Help" or "About". (It's different on different versions of the game. This is all the options you'll need in any case.)

Click the "User Interface" button. By default it will be on "Automatic" but if it is on "Monochrome" or "Tiled" and you want to switch to the new interface, select it.
