Q: How to use jnilibs outside of JNA? I tried loading libjnilibs.so to java program via System.loadLibrary("libjnilibs") but I can't figure out how to use libjnilibs from java without JNA. What steps need to be taken in order to use it? Thank you

A: For future readers of this question, here's the current state (September 2017) of the previous answers: Please keep in mind that there are changes in this area, see the following Wikipedia article. There's a new way of getting access to the native system without JNA. It's called `jna_actxgetSystemServiceProperties`. It requires three important changes to the original question: you need to use `jna.Callback` as parameter for `JNINativeInterface` you need to use `JNINativeInterface.INSTANCE_ATTACH_METHOD_NOT_INITIALIZED` instead of `JNINativeInterface.INSTANCE_ATTACH_METHOD` you also need to set the native method name. The name is different, depending on the architecture. For x86, it's `jna_actxgetSystemServiceProperties`. For x64, it's `jna_actxgetSystemServicePropertiesX64`. The main advantage of using this new approach is that you can pass in the parameters directly to the native methods, without having to create an anonymous class and fill parameters with null. Here's an example of calling the native function
