adriamycin on the activity of DNA- and RNA-synthesizing systems in cardiac muscle and ascite cells of mice]. The effect of Adriamycin (ADM) on the synthesis of DNA and RNA in the heart and ascites cells of mice was studied. Adriamycin increased the rate of DNA synthesis and the content of RNA in mouse myocardium at the early stages of the drug administration. In the nuclei of myocardium cells and ascites cells Adriamycin decreased the amount of some RNA components. The time course of the drug effect on cardiac and ascites cells indicated a slower transition of the changes into the later stages of the treatment. In ascites cells, DNA and RNA synthesis was considerably slower. The decrease of RNA content was marked in the nuclei of myocardium cells and ascites cells, whereas in the cytoplasm of these cells the reaction was less pronounced.[Giant intradural schwannoma causing a long tetraparesis with vertebral compressive lesion. Case report]. The aim of this work is to highlight a new case of giant intradural schwannoma presenting with tetraparesis and vertebral compressive lesion. A 39-year-old male

---

patient was admitted in our hospital for exploration of a giant mass in the L3-L4 intervertebral space. It was present for several years without significant evolution. The imaging study showed that the mass was well circumscribed and was large enough to cause mechanical compression of the spinal cord. It was removed using a posterior approach. After surgery, a spontaneous, although incomplete, relief of the neurologic deficit was observed. Histology examination confirmed the diagnosis of a neurogenic tumor. The mass was well-encapsulated with no evidence of local recurrence at a follow-up of 18 months. Schwannomas are benign tumours with an unpredictable evolution. They are usually found intraspinally
