File Delete Utility is a utility for storing files in a centralized system so they can be found even if the drive fails. This way you will not lose precious files when your hard drive fails, and you will not need to spend time manually sifting through the directories for each file to find it. The utility offers automatic recognition of all files in the disk, including archives, compressed, executable, and plain text files. The removal of a file from the system is also ensured, thus making sure you do not accidentally delete valuable work. The utility has an interface that is very minimal and user-friendly, allowing you to easily select a file or group of files, then select the location where you want to store those files, then start the removal process. Files that were not found or do not exist on the disk will be skipped. During the removal process you have the possibility to create a batch of files to be erased. The utility will run in background without any user intervention needed. You can select the file to be removed by browsing your drives for it, drag and drop files into the program, or move files from other file manager to be removed by going to the right menu and selecting the option for file removal. The utility allows you to browse for a directory in order to scan it for a file first. After confirming, the file will be removed and removed permanently, even if you edit that particular directory's files. You can stop the process at any moment, or go through the directory normally. Because the utility does not destroy the files on the disk or system, you will be able to find the files again by going into the directory where the files were erased.
