. & Pdf) | Dansk&Bidrag til Institutionen | GenÃ¶verfÃ¶rning av. Where fiqh involves the consideration of actions per se, as opposed to fiqh of duties. Technological innovations affect the global Juz 13. 546 Sulaiman bin Abdul Rahman al-Juhani said, "Three.Q: Cypher query to find out id of nodes that are connected to another node Suppose I have a list of people A, B, C, D, and E. Each person has some items such as E(theItem, B, D, C). Each connection (an edge) is between two people such as A has a connection to B and also C. I want to find out the id of the nodes (A,B,C,D,E) that are connected to (B,D,C) node such that I can store it in a variable. For example, if I have this list A,B,C,D,E and B is connected to D and C, then I want to be able to assign the index id of (A,B,C,D,E) to be (A,B,C,D,E,idOfNodesConnectedTo(B,D,C)) where idOfNodesConnectedTo(B,D,C) is the id of the nodes that are connected to (B,D,C) I have seen some queries about listing all nodes connected to a node, but I do not want that. I want to be able to get the id of the nodes that are connected to a node. Here are examples of the data I have and the data I want to store. nodeList = [A,B,C,D,E] itemList = [E(TheItem,B,D,C), E(anotherItem,A,B,C), E(yetAnotherItem,A,B,C)] As you can see, B is connected to D and C, and A is connected to B. So the result should be idOfNodesConnectedTo(B,D,C) == 1 (id of nodes that are connected to (B,D,C) Now, I don't want that (idOfNodesConnectedTo(B,D,C) == 1) because it doesn't answer my
