Adobe is already laughing at the first 'photo editing app,''again, Adobe, and to those who may be brand new to this type of software, it is well worth the price to learn. Especially if you have a full time graphic designer working for you. This program matches them all. And then some! We all need a photoshop now and then to edit a lot of images and there are plenty of them in stock. I'm not sure when photoshop was first available on a mobile device, but it's no longer a surprise to find yourself on the go with a handy photo editing tool. It's incredibly easy to make some quick edits on the go with the single purpose of transforming a photo you took on the go into something you could be proud of. It's simple, but access to tools that are designed for photo editing on your iOS device really make this app shine. Speed scatters directly where you press down, while the opacity slider adjusts the transparent parts of the brush. Simply pick a key color and go. This can be a bit daunting and not intuitive when you're first getting into the app but the interface is clean and easy to learn. The big news this release is Adobe's Audition update. Now called Video 2.0, the application's functionality is significantly enhanced. What was previously a fairly basic video editing application is now robust and deep–indeed, an intimidating one. Video 2.0 features include improvements to units, audio panning and volumes, auto leveling, audio synching, angle alignment, and more.
