## **What's New In?**

Get IP and Host is a very simple software application with a name that pretty much sums up its functionality - it allows you to find out the IP address and host name of a computer via LAN. After a brief installation procedure, Get IP and Host brings up a small window

with a plain and intuitive layout. The "what you see is what you get" concept certainly applies to Get IP and Host, as there are no other features available, aside from the ones visible in the main application window. In order to find out the IP address or host name of a computer, you need to know its IPv4 or IPv6 address, host name or computer name. Revealing the information is done with the click of a button, and it can be copied to the

Clipboard for further use. Furthermore, you can view a history of the data you have inputted. The straightforward application runs on a very low quantity of CPU and system memory, has a good response time and quickly scans the computers in range to detect the IP address or host name. No error dialogs have been shown in our tests and Get IP and Host did not hang or crash; we have not encountered any issues. To sum it up, this application may not be

particularly resourceful, but it offers a quick solution for finding out the IP address or host name of another computer. Get IP and Host can be handled by users of all skill levels, even rookies. Getting IP and Host is a very simple software application with a name that pretty much sums up its functionality - it allows you to find out the IP address and host name of a computer via LAN.
