I am a big fan of this new tool. On my MacBook, I'm still using Photoshop CS6. I haven't tried the new release yet, but from what I saw at NAB, it looks very promising. It will be the first tool I acquire for my iPad Pro. I am very happy to see support for the new iPad Pro in Adobe Photoshop CS6. It allows me to work efficiently from anywhere and is my favorite photo editor ever. The new features are just so intuitive, I just expected some of the features would work the same on my MacBook and iPad Pro. Makes for a very efficient workflow. The new app for iPad Pro is a great addition to the interface, and Adobe delivered a thoughtful experience. I would love to see more consistency with design elements, but this is definitely an update I am thrilled to have. MS this is a muah-mah "treat" (not sure if that's brindle new SLP kinda word). Yeah, an update can be nice but at the end of the day, the current state of desktop continues to be my workflow, and yup, it's still on screen. For the average user it's still a simple, often simple, and often bare look and feel, and I am ok with that. The iPad Pro has always been a curious creation. Enough users tried it and figured out that it can be quite a tool for touch working. But a lot of the engineers assumed their 10.5 and 12.9 inch displays were the be all and end all. It is not often that Mac's have been a yes or no question as to whether you care for a certain platform. Here is one in which people rushed to the iPad Pro and saw they weren't even using it because it was too big.

Photo editing with the new mobile edition of Photoshop is intuitive, fun, and more important, speedy. Accuracy and manual tools for retouching have been optimized to speed up your

workflow. You can choose from high-powered controls, or a more manual approach that lets you see your adjustments happen in real time. Another issue is that Photoshop doesn't come with every feature most users need to edit and maneuver images. Some of the extras are accessible through the Creative Cloud collection of subscription-based online services. This setup seems to be the best solution for casual image editors; those who are sometimes intimidated by the learning curve of the software may be better off with a subscription to **Creative Cloud**. Adobe Typekit, the cloud-based service for onsite publishing, and Web design, announced a new version of it. Adobe Typekit for web now enables mobile designers and developers to build, test, and deploy websites without the need of a developer.
