Japanese Patent Laid-Open No. HEI 10-232312 discloses a vehicle brake system, including a disk rotation detecting switch which detects rotational characteristics of a disk installed in a wheel brake. The detected rotational characteristics include information on brake wear. By detecting rotational characteristics of the disk, the disk rotation detecting switch can detect whether the wheel brakes are in good condition or bad condition. When the wheel brakes are in good condition, the disk rotation detecting switch may be operated without difficulty. When the wheel brakes are in bad condition, such as when they are worn out, the disk rotation detecting switch may not operate. Therefore, the disk rotation detecting switch can provide information on the wheel brakes so that the vehicle can be operated by the operators with caution. However, the vehicle brake system disclosed in the above-identified Japanese patent publication has a drawback that a user cannot know whether the wheel brakes are in good condition or bad condition until he/she operates the vehicle. This drawback, especially when the brakes are in bad condition, may cause safety problems.Q: Sorting an array of objects by a number of integers in it I have an array of 100 objects, I need to sort this array and I have all the ids of the objects in the array. KEYMACRO allows you to define macros (keystrokes) in your favorite text editor (notepad, MS Word,...) for later reuse. With KEYMACRO you can easily reuse, for example, the following commands in your favorite text editor: 1. Go to the "Documents" folder and select all "*" (wildcard) files. 2. Open all of them. 3. Rename all "*.txt" files to "*open.txt" With KEYMACRO you can create and run one or more macros at any time. You can also bind keyboard hotkeys to run the macros you want. KEYMACRO is very flexible and uses standard Windows hotkeys. KEYMACRO was written in MS Visual C++6.
