Works as a WiFi signal sniffer and analyzer, detecting all kinds of WiFi connections available, what type of signals they send and receive, and their properties, and displaying a real-time visual map of WiFi network access points. KEYMACRO aims to provide easy access to WiFi networks. Once you enter a WiFi access point name and click on "scan", it can detect all the WiFi networks available, and connect you to the strongest one. It can detect WiFi networks that connect through wired and wireless connection, and those networks that support certain access point security

method, such as WPA/WPA2-PSK, WPA2-EAP or WPA2-EAP/WPA/WPA2-PSK.

KEYMACRO can also detect and read the access point name and security settings, and read RSS 2.0 (news)feed and display news headlines and text, and link to the original news item. Program is made for wireless connections but can be used for any type of connection. -- -> KEYMACRO

Features: 1. WiFi signal sniffer and analyzer - it detects all kinds of WiFi connections available, what type of signals they send and receive, and their properties, and displays a real-time visual map of WiFi network access points. 2. Ability to identify any WiFi networks using the specified Access

Point Name, network BSSID or MAC address. 3. Simple to use and compatible with Windows 7 and above. 4. Can identify all known wireless networks available. 5. Simple network scan and connect feature. 6. Interact with RSS 2.0 (News) feed using the pre-defined RSS feed address. 7. Show or hide the main window using hotkeys and "Alt+Tab". 8. Supports the latest version of RSS 2.0 (News) feed format. 9. Automatically detects RSS 2.0 (News) feed address and updates and parses RSS 2.0 (News) feed automatically. 10. Supports all web browsers (IE, Firefox, Opera, Chrome, and Safari). 11. Can be configured to remember the last login session. -- To use

KEYMACRO, you only need to enter the Access Point name (AP name) or the BSSID of the network you want to scan. You can also set the RSS 2.0 (News) address you wish to use. After clicking on "Scan", the program will start to scan for all kinds

What's New In WiFi Live?

This is the final (beta) version of WiFi Live. The last version was an alpha which could detect wired and wireless network connection, but it was missing many features. That alpha version could only display 30 RSS feeds, but today you can display upto 200 RSS feeds, and also display updated headlines, audio and text for those RSS items, as well as the ability to listen to specific RSS feeds and stop listening. You can also parse a lot of RSS feeds with this version, and have them displayed by different screens on the main window. Main features: * Can detect wired and wireless network connection * Can display RSS feeds for over 200 RSS feeds, and also display

headlines, audio and text for those RSS items. * Can stop displaying RSS feeds that are not in the news database * Can listen to specific RSS feeds, or even listen to a specific channel * Can display the news headlines from RSS feeds, and also display RSS feeds on the main window. * You can change the size of the RSS items, and can change the spacing between items * You can choose to hide items that are not in the news database * You can choose to display the RSS feeds in a different order * You can choose to display the RSS feeds in a treeview * You can choose to display the RSS feeds in a gridview * You can choose to filter RSS feeds by date, type, domain, and author *

You can choose to filter RSS feeds by category * You can choose to filter RSS feeds by RSS-domain * You can choose to filter RSS feeds by RSS-type * You can choose to filter RSS feeds by RSS-author * You can choose to filter RSS feeds by RSS-category * You can choose to filter RSS feeds by URL * You can choose to exclude RSS feeds that are not in the news database * You can choose to display all RSS feeds that are not in the news database * You can choose to display RSS feeds for specific days * You can choose to display RSS feeds for specific months * You can choose to display RSS feeds for specific years * You can choose to display RSS feeds for

specific years that are not in the news database * You can choose to display RSS feeds for specific cities * You can choose to display RSS feeds for specific countries * You can choose to display RSS feeds for specific countries that are not in the news database * You can choose to display RSS feeds for specific time zones * You can choose to display RSS feeds for specific time zones that are not in the news database * You can choose to display RSS feeds for specific RSS-domains * You can choose to display RSS feeds for specific RSS-domains that are not in the news database * You can choose to display RSS feeds for specific RSS-domains that are not in the news

database * You can choose to display
RSS feeds

System Requirements:

Operating System: Windows 7, Windows 8, Windows 8.1, Windows 10 Processor: Intel Core 2 Duo 1.83 GHz Memory: 2 GB RAM Graphics: 1 GB RAM DirectX: Version 11 Hard Drive: 300 MB available space Sound Card: DirectX 11 compatible Internet Connection: Broadband Internet connection How To Install & Play: Step 1: Download the latest version of Gameranger from here. Step 2: Unzip the package using 7-zip and run the setup
